1 OVERVIEW AND BASIS OF PREPARATION

1.1 BUSINESS BACKGROUND

Jefferies (Jefferies Group LLC and its subsidiaries) is a global investment banking firm providing clients with capital markets and financial advisory services, institutional brokerage and securities research, as well as wealth management. The firm provides research and execution services in equity, fixed income, foreign exchange, futures and commodities markets, and a range of investment banking services including underwriting, mergers and acquisitions, restructuring and recapitalization, and other advisory services, with all businesses operating in the Americas, Europe and Asia. Jefferies Group LLC is a wholly-owned subsidiary of Leucadia National Corporation (NYSE: LUK), a diversified holding company.

Jefferies operates in the United Kingdom ('UK') through its two main broker-dealers, Jefferies International Limited ('JIL') and Jefferies Bache Limited ('JBL') along with their parent-holding company Jefferies International (Holdings) Limited ('JIHL') (together the 'JIHL Group' or 'Group' for regulatory and accounting consolidation purposes). JIHL's immediate parent undertaking and controlling entity is Jefferies Group LLC.

1.2 REGULATORY FRAMEWORK: BASEL ACCORD AND PURPOSE OF THE PILLAR 3 REPORT

The Basel framework, implemented in the European Union ('EU') via the Capital Requirements Directive ('CRD') and the Capital Requirements Regulation ('CRR'), sets out minimum capital requirement standards for firms to ensure they are adequately capitalised against the risks they face and are able to withstand losses during periods of stress conditions. The framework consists of three pillars:

- **Pillar 1** sets out the minimum capital requirements for credit and counterparty, market and operational risk;
- **Pillar 2** covers the review process by firms and supervisors to assess the appropriateness of the Pillar 1 level of capital and concludes on any additional capital to be held for risks not captured or not adequately captured by Pillar 1; and
- **Pillar 3** encourages market discipline and transparency through appropriate disclosures on capital adequacy and risk management processes.

The purpose of this Disclosures Report (the 'Report') is to set out how JIHL and its material subsidiaries comply with the Pillar 3 requirements under Basel 3 as set out in articles 431 to 455 of the CRR as well as with other relevant standards including SYSC19.3A (the FCA's Sourcebook for Senior Management Arrangements, Systems and Controls) and technical standards published by the European Banking Authority ('EBA'). This Report focuses primarily on regulatory measures of risk exposure and capital requirements for the following Principal Risks under Pillar 1: credit (counterparty) risk; market risk; and operational risk.

1.3 SCOPE OF THE PILLAR 3 DISCLOSURES AND BASIS OF CONSOLIDATION

This Report relates solely to the consolidated activities and position of JIHL and its material subsidiaries as at 30 November 2014. As at that date, the significant subsidiaries of the JIHL Group were JIL and JBL, both of which are incorporated in the UK and are subject by the FCA to regulatory supervision and minimum capital standards both on a standalone and consolidated basis.

JIL and JBL's consolidated financial results and aggregated risk profile are material to the JIHL Group. The consolidation basis used is the same as that used for reporting regulatory capital adequacy to the FCA. This scope of consolidation is the same as that used for statutory accounting reporting for JIHL's activities and includes the branch and subsidiary network of JIL and JBL.

1.4 POLICY, FREQUENCY OF PUBLICATION AND VERIFICATION

Policy - As part of the Capital Management Framework, the JIHL Group has a policy in place to assess the appropriateness of its Pillar 3 disclosures, including their verification and frequency of review and publication. The Pillar 3 policy, in line with the CRR requirements, also requires that the external disclosures present the Group's risk profile comprehensively, subject to the information being material and not proprietary or confidential. No information has been omitted from this report on the basis that the information may be proprietary or confidential.

Frequency - The Group's policy is to publish this Report at least annually using the accounting reference date and, if appropriate, more frequently if there is a significant change in the Group's risk profile.

Verification - The 2014 disclosures were validated and approved internally by senior management in line with the Pillar 3 Disclosures policy. Validation checks and reconciliations are performed within the Controllers function. The

internal validation process included data validation by Senior Management in Controllers, Risk, Human Resources, Legal and Regulatory Reporting, and final approval by the JIHL Board of Directors.

1.5 PRESENTATION OF RISK EXPOSURES AND ACCOUNTING PRINCIPLES

Unless otherwise stated, the calculation methodologies underlying the measurement of the risk exposures and risk exposure requirements in this Report are those required in the CRR for use by the JIHL Group in its consolidated regulatory risk reporting submitted to the FCA. In general, the measurement of exposures for regulatory risk reporting purposes is based on standard regulatory calculations. Therefore, these exposure measures may be materially different from those used by Jefferies generally for risk management internally and those used for external risk disclosures, including in the JIHL Group's financial statements and Jefferies' public disclosures.

The basis of consolidation used for JIHL Group for accounting purposes is materially consistent with that used for regulatory purposes. Except for the application of the exposure measurement methodologies described above, these disclosures have been prepared in accordance with applicable UK Generally Accepted Accounting Principles with further adjustments made where required to comply with the requirements of part two (own funds) and part three (own funds requirements) of the CRR.

This document does not constitute a set of financial statements. Financial statements for the JIHL Group are prepared in accordance with applicable UK company law and accounting standards. The JIHL Group sets out its approach to valuation and impairments in the notes to its financial statements.

1.6 OTHER DISCLOSURES

Whilst the JIHL Group is a material sub-group of Jefferies, the information disclosed in this document is not necessarily indicative of Jefferies as a whole, nor is it comprehensively representative of the Jefferies' activities in any particular region, nor does it preclude possible changes in policy, strategy, risk appetite, or approach. Investors, stakeholders, or other users seeking information on capital adequacy, risk exposures and risk management policies should consult the public disclosures of Jefferies.

Jefferies is committed to providing transparency of its capital resources and risk management practices to provide better information to a wide range of users while minimising duplication. As such, complementary disclosures to this document may be found in different reports. Where the Pillar 3 disclosures focus on regulatory capital information and risk management, other disclosures include Jefferies public disclosures and financial statements.

- **Jefferies Regulatory Disclosures:** Jefferies is required by the US Securities and Exchange Commission ('SEC') to file public disclosures at a consolidated group level. Some of the information in these disclosures is applicable to the JIHL Group. These disclosures can be found at:

<http://investor-relations.jefferies.com/CorporateProfile.aspx?iid=102756>

- **Financial Statements:** These disclosures should be read in conjunction with the financial statements of Jefferies. These can be found at:

<http://www.jefferies.com/cositemgr.pl/html/InvestorRelations>

- **Country by Country Reporting:** As of 1 January 2014, entities in the JIHL Group comply with country by country reporting ('CBCR') requirements under article 89 of CRDIV. The regulations require Jefferies to publicly disclose annually on a consolidated basis, by country where they have an establishment, certain information on their activities according to geographical location. These can be found at:

<http://investor-relations.jefferies.com/CorporateProfile.aspx?iid=102756>

2 GOVERNANCE & RISK OVERSIGHT

2.1 BOARD OF DIRECTORS

2.1.1 BOARD AND DIRECTORSHIPS

The Boards of Directors in the JIHL Group are responsible for the long term success of the Group by creating sustainable value for the firm's sole shareholder, Jefferies Group LLC, whilst safeguarding Jefferies' name, reputation and credit rating. Figure 1 shows the number of directorships held by members of the JIHL, JIL and JBL Boards. The Boards of JIL and JBL ('the Boards') set strategy, in line with delegated authority from the shareholder, and oversee its implementation through the approved Business Plans ensuring that those are pursued within the Board-approved Risk Appetite.

Figure 1: Number of Directorships Held By Members of the Board

| Name | Position | Directorships | |
|------------------|---|---------------|---------------|
| | | Executive | Non-Executive |
| David Weaver | President of Jefferies International Ltd. | 2 | 0 |
| Marc Bailey | President of Jefferies Bache Ltd. | 1 | 2 |
| Timothy Cronin | Head of EMEA Fixed Income | 1 | 0 |
| Huw Tucker | International Chief Financial Officer | 2 | 0 |
| Timothy Barker | Non-Executive | 0 | 2 |
| Dominic Lester | Head of European Investment Banking | 1 | 0 |
| Andrew Shortland | Head of Equities EMEA | 1 | 0 |
| Alan Gibbins | Non-Executive | 0 | 6 |
| Patrick Campbell | Non-Executive | 0 | 4 |

Executive directorships within the JIHL Group are counted as one directorship. All Executive Directorships are held within the Jefferies or Leucadia groups of companies. All of the above directorships are compliant with CRDIV requirements.

2.1.2 BOARD RECRUITMENT

Recruitment for, and appointment of, a member of the Board combines an assessment of technical capability and knowledge base as well as competency skills with reference to Jefferies' leadership framework. During 2014, the Boards have established a Nominations Committee consisting of only non-executive Directors. The Committee formalises the process for the appointment of new Board members by identifying and recommending for approval, by the Boards, candidates to fill Board vacancies having evaluated the balance of knowledge, skills, diversity (including gender) and experience of the Boards. When recruiting members to the Boards the Committee considers a broad set of qualities and competencies and assesses the time commitment required.

Board recruitment is subject to the approval of each of the Boards, including the Chairman and the non-executive directors. As part of the formal Director appointment process, Jefferies takes a number of additional checks, coordinated through the Human Resources and Legal Departments, which include but are not limited to: criminal record searches; a financial probity search; a UK directorship check; a sanction list check; an electoral register check; FCA/PRA Register search; employment reference checks. Regulatory approval is co-ordinated through the Chief Compliance Officer. The Nominations Committee has oversight of the induction process for new Directors and the on-going training and development of all Board members.

2.1.3 BOARD DIVERSITY

Jefferies is committed to promoting a diverse workplace, and approaches diversity in the broadest sense recognising that successful businesses embrace diversity at all levels. As part of its duties, the Nominations Committee is also responsible for considering a broad set of qualities, skills and competencies when recruiting members to the Boards and for that purpose consider the diversity of the Boards, including gender. The Nominations Committee will also periodically, and at least annually, assess the structure, size and composition, including diversity of the Board, and make recommendations to the Boards with regard to any changes.

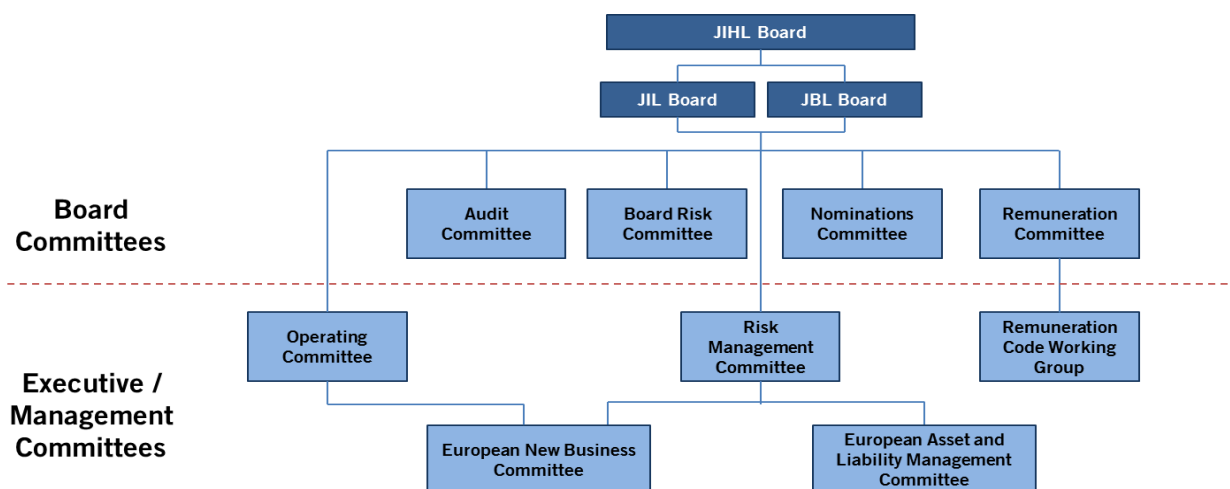

2.2 RISK OVERSIGHT COMMITTEES AND INFORMATION FLOWS

The Boards require that Senior Management including the executive members of the Boards, business heads and heads of control functions, take an active role in the risk management process and require business and support functions to assist in the identification, assessment and control of all risks.

The Boards have set up a hierarchy of Board and Management Committees and Sub-Committees, collectively the 'Risk Oversight Committees', with the objective of ensuring an effective risk governance structure. The Boards approve the Terms of Reference of each of the Board Committees and Management Committees. In addition to delegating, the Boards reserve certain matters to themselves as set out in the Board Charter. This arrangement enables the Boards to:

- Interact effectively with the executive team which is charged to deliver the Group's agreed strategy whilst effectively managing the risks;
- Establish a robust control framework to manage risk effectively across the businesses, whilst allowing effective challenge, oversight and decision making;
- Benefit from the work of dedicated committees focussed on important risk areas;
- Receive management information on compliance with the Risk Appetite; and
- Ensure clear escalation procedures are in place to enable effective decision making and risk management.

Figure 2: Board and Executive Management Committees

Through the Risk Management Framework, the Boards require a comprehensive and integrated view of risk and risk management and the use of a common risk language / taxonomy across the Firms. They also approve the standardised form, frequency and content of the risk information they require to be presented to Board meetings.

2.2.1 BOARD COMMITTEES

- **Board Risk Committee** – The Committee members are all non-executive directors. The Committee reviews and approves respective policies for each of the Principal Risks at least annually. The Committee has met six times in 2014.
- **Audit Committee** – The Audit Committee members are all non-executive directors. It assesses and provides oversight on regulatory matters, reviews disclosures, significant financial reporting issues and material information in annual reports. It evaluates external and internal auditors, reviews the management letter and response, approves the annual audit plan and reviews the adequacy of internal controls.
- **Nominations Committee** – The Committee is responsible for identifying and recommending for approval, by the Boards, candidates to fill Board vacancies, having evaluated the balance of knowledge, skills, diversity and experience of the Boards.
- **Remuneration Committee** – The Committee is responsible for ensuring the Group's annual Remuneration Policy Statement and remuneration structures comply with the Remuneration Code (see section 5 for more details).

2.2.2 EXECUTIVE / MANAGEMENT COMMITTEES & SUB-COMMITTEES

Management Committees & Sub-Committees – These Committees (which include, amongst others, the Risk Management Committee, Operating Committee, New Business Committee and European Asset & Liability Management Committee – 'ALCO') meet more frequently, at least monthly. The Committees oversee specialized areas and escalate significant issues to the Board Committees and the Boards accordingly.

3 RISK MANAGEMENT FRAMEWORK

3.1 BOARD RESPONSIBILITY

The Boards of JIL and JBL are ultimately responsible for the governance and oversight of risk management and ensuring adequate systems and controls are maintained to enable risks to be appropriately identified, measured, managed and monitored. With reliance on the risk management framework and the annual controls assurance testing programme undertaken by internal audit, the Boards consider that the risk management systems and controls in place are adequate for the Group's strategy and risk profile, these being designed to manage rather than eliminate the risks the Group is exposed to and as such offer reasonable but not absolute assurance against material misstatement, fraud and loss.

3.2 APPROACH TO RISK MANAGEMENT

3.2.1 THREE LINES OF DEFENCE MODEL

The Boards have adopted the Three Lines of Defence operational model which ensures segregation of duties and demonstrates the roles, responsibilities and accountabilities for risk, control and decision making. The approach adopted includes:

- **First Line** - Those responsible for initiating and directly identifying and managing the risks. Includes those that commit the Group's liquidity and capital resources.
- **Second Line** - Oversight and independent controls.
- **Third Line** - Provide independent challenge and assurance.

3.2.2 RISK MANAGEMENT DEPARTMENT

The independent Risk Management Department ('Risk Management'), headed by the EMEA Chief Risk Officer ('CRO') forms the second line of defence for market, credit, liquidity and operational risks. Risk Management consists of five teams: Market and Liquidity Risk; Credit Risk; Operational Risk; Model Validation; and Risk Control. The heads of the teams report to the EMEA Chief Risk Officer ('CRO').

The Boards of JIL and JBL approve the mandate of the Department and the job specification for the CRO as part of the RMF. The CRO reports directly to the President and meets with the Boards at least quarterly to provide updates on the Group risk profile and compliance with the Risk Appetite Statements.

3.2.3 RMF

The RMF sets out the processes for the review, challenge and approval of the risk management policies and procedures, the risk appetite statements, risk limit structures and risk management processes and reporting.

The RMF requires that there are policies in place for managing each of the Principal Risks identified by the Boards with named owners and committees responsible for the day-to-day monitoring of each of those risks on behalf of the Boards. The ICAAP¹ and ILAA² documents which govern the over-arching risks of capital and liquidity are approved annually by the Boards; the other Principal Risk policies are presented to the Board Risk Committee for review and approval at least annually.

3.2.4 LIMIT FRAMEWORK

The JIHL Group applies a comprehensive framework of limits on a number of key metrics to constrain the risk profile of the business activities as part of the Risk Appetite Statements ('RASs'). The size of each limit reflects the risk tolerance for a certain activity under normal business conditions.

Stress testing is performed and reported daily as part of the risk management process. In addition, ad hoc stress tests and scenario analyses are performed and new scenarios added as market conditions dictate. Stress testing is used to assess our aggregate risk position as well as for limit setting and risk/reward analysis.

3.2.5 RISK ASSURANCE

The Board Audit Committee reviews the work product and resourcing of Internal Audit which provides independent assurance on the design, adequacy and effectiveness of the system of internal controls.

¹ Internal Capital Adequacy Assessment Process

² Individual Liquidity Adequacy Assessment

Reviews from third parties including External Audit, exchanges, regulatory and rating agencies also provide independent feedback on the internal control arrangements. However since they are third parties, the Group cannot rely upon them to be a formal part of their control structure, accountable to the Boards.

Internal Audit takes steps to verify compliance with the approved policies as part of their role to verify the implementation and effectiveness of the RMF.

3.3 ADHERENCE TO THE BOARDS' RISK APPETITE STATEMENT

The Risk Appetite Framework ('RAF') sets the overall approach through which risk appetite is established, communicated, and monitored. The RAF is a key component of the RMF, the ICAAP, the ILAA, the proceedings of the Board and Risk Oversight Committees. It provides a common understanding and guidance on the acceptable level of risk in all the Principal Risk categories the Group is facing and provides a link between the Business Plans and risk management.

The Boards have identified and approved the Principal Risks which arise from implementing the Boards' approved Business Plan for JIL and JBL: **Capital Risk; Market Risk; Credit Risk; Operational Risk; Conduct Risk; and Liquidity Risk**. The overall risk appetite is to accept moderate and controlled risks as part of the Group's main focus of facilitating client-driven business³ while maintaining:

- Adequate capital resources, to cover both regulatory requirements and to support the business in business as usual(BAU) and stressed conditions; and
- Stable and efficient access to funding and liquidity, to ensure that there is sufficient liquidity to meet the Group's obligations when due.

The Boards are updated quarterly on the status against the risk appetite metrics. Figure 3 sets out the Principal Risks and a number of key measures used to monitor the Group's risk profile.

Figure 3: Principal Risks and RAS Metrics

| Principal Risk | RAS Metric(s) and Comments | Measure status as at 30 November 2014 |
|---|--|---|
| <p>Capital Risk</p> <p>The risk that the Group's capital, both at solo and consolidated level, is inadequate to satisfy regulatory requirements, support business goals or general solvency.</p> | <p>The Group maintains targets for the following ratios:</p> <ul style="list-style-type: none"> ▪ Solvency Ratio; ▪ Common Equity Tier 1 ('CET1') Ratio; and ▪ Total Capital Ratio. <p>The Group targets minimum buffers well above the regulatory capital guidance thresholds and has consistently maintained throughout the year significant surpluses to those thresholds. The Business Plans are approved on the basis of capital plans over a long time horizon of three years. The ICAAP also shows surplus capital over a three year period even after a stress event.</p> | <p>JIHL (at consolidated level):</p> <ul style="list-style-type: none"> ▪ Solvency Ratio: 241% ▪ CET1 Ratio: 9.5% ▪ Total Capital Ratio: 19.4% |
| <p>Market Risk</p> <p>Market risk is defined as the risk of loss due to changes in market prices and /or other parameters</p> | <p>JIL and JBL have set up a number of Level 1 and Level 2 market risk limits. The Level 1 limits set at firm level include metrics around the worst case loss of a series of stress tests; and a 1-day 95% Value At Risk limit.</p> <p>Level 2 limits are set up at desk level and include additional limits based on market value and sensitivity based metrics.</p> | <p>JIL utilisation of limits:</p> <ul style="list-style-type: none"> ▪ Stress: 65% ▪ VaR: 30% <p>JBL utilisation of limits:</p> <ul style="list-style-type: none"> ▪ Stress: 33% ▪ VaR: 10% |

³ In order to facilitate client transactions, the Group may act as principal to provide liquidity which requires the commitment of its capital and maintenance of dealer inventory.

| | | |
|---|--|---|
| <p>Credit Risk</p> <p>The risk of loss due to adverse change in the JIHL Group's clients and counterparties' creditworthiness or their inability or unwillingness to meet their financial obligations under the term and conditions of a financial contract as and when they fall due.</p> | <p>The Group's risk appetite requires that no credit limit to a single counterparty (with the exception of central counterparties) can be higher than the lowest excess capital (as defined by the Boards) in the past 12 months without Board approval.</p> <p>The credit limit approval process is managed under the Credit Risk Policy (set out in section 4.2) and includes consideration of exposures to single counterparties, groups of connected counterparties, counterparty in one country and in one industry / trading the same products.</p> | <p>All credit risk exposures were within the credit risk limits as at 30 November 2014.</p> |
| <p>Operational Risk</p> <p>The risk of loss resulting from inadequate or failed internal processes, people and systems, or from external events (including legal risk).</p> | <p>The risk profile of operational risks is determined using a Heat Map (based on assessments for operational risks against potential financial impact and likelihood of occurrence). The risk appetite for operational risk is expressed as to the maximum combination of financial impact and likelihood of occurrence, above which an operational risk is deemed unacceptable by the Boards of Directors and corrective action should be taken to reduce the likelihood of occurrence.</p> <p>Operational risks are also assessed using forward-looking scenario analysis and other ad-hoc risk assessments (as described in section 4.4).</p> | <p>As at 30 November 2014, there was one operational risk against which the Board has asked remediation measures to be taken, which the Boards will review, to reduce its likelihood of occurrence.</p> |
| <p>Conduct Risk</p> <p>The risk that detriment is caused to customers, clients, counterparties, markets or JIHL itself because of the inappropriate execution of our business activities.</p> | <p>As operational risk above, this is assessed using a Heat Map, as well as forward-looking scenarios analysis and ad-hoc assessments.</p> | <p>No conduct risk is assessed to be outside the risk appetite as at 30 November 2014.</p> |
| <p>Liquidity Risk</p> <p>The risk of loss due to the Firms being unable to meet its cash or funding obligations as they fall due in a timely manner or would have to meet these obligations at excessive costs.</p> | <p>The risk appetite for liquidity risk is determined using the following:</p> <ul style="list-style-type: none"> ▪ Prudent Funding Profile – setting thresholds for the profile of the funding structure to ensure this is appropriately diversified with respect to tenors and maturity; and ▪ Liquid Asset Buffer ('LAB') – setting minimum thresholds for the LAB to ensure this is of a sufficient size to cover the higher of the Internal Liquidity Requirement ('ILR'), and the Individual Liquidity Guidance ('ILG') set by the FCA. <p>The Group has maintained at all times throughout the year liquid resources well above the regulatory and internal minimum requirements (assessed through liquidity stress testing over a 93 day survival period).</p> | <p>LAB resources were 181% of the higher of the ILR and ILG requirements as at 30 November 2014.</p> |

4 PRINCIPAL RISK MANAGEMENT

4.1 CAPITAL RISK MANAGEMENT

4.1.1 CAPITAL MANAGEMENT FRAMEWORK OVERVIEW

The Capital Management Framework ('CMF'), which is reviewed and approved by the Board Risk Committee annually, formalises the overall approach to capital management within the JIHL Group as directed by the Boards. The CMF provides that the risk appetite statement for capital risk is supported by a comprehensive set of monitoring metrics, management information, appropriate oversight and that adequate capital is held against all material capital risks.

4.1.2 GOVERNANCE

Senior Management review capital levels on an on-going basis to support business needs as well as respond appropriately to market conditions. Capital adequacy, including resources and requirements, is monitored and managed daily by the Regulatory Controllers Department which also needs to sign-off on all New Business Approvals. Within the JIHL Group, capital management and planning are overseen by various committees reporting up to the Boards, including the Operating Committee, and the European ALCO and, on a quarterly basis to the Boards. Management Information ('MI') on capital ratios, solvency ratios, capital utilisation, key risk indicators and trends are reported to these Committees and are readily available at all times to support the strategic and business decision making as required.

4.1.3 CAPITAL MANAGEMENT AND OWN FUNDS

The capital management policy is to maintain a strong capital base that is comfortably above the minimum regulatory capital requirements to support all material risks inherent in the Group's businesses and market environment; capital forecasts are evaluated both short-term (less than three months) as well as medium term (minimum of three years) with the following objectives:

- To support the Board-approved strategic objectives and business plans; and
- To remain adequately capitalized and be able to withstand losses during periods of stressed conditions without material franchise or business impact.

The size and composition of JIHL's capital base are determined by a number of factors including the minimum regulatory capital requirements (Pillar 1) as well as the capital planning methodologies and processes, which include the ICAAP (Pillar 2). They may also be impacted by other factors such as rating agency guidelines for Jefferies, the business initiatives and opportunities; cost and availability of both long term and short term funding; stress testing analysis (which assesses the potential future losses due to adverse changes in JIHL's business and market environment); as well as regulatory changes such as recent implementation of Basel 3.

Figure 4 shows the composition and size of the Group's own funds as at 30 November 2014 based on the audited financial statements. Appendix 1 summarises the key features of the Tier 1 and Tier 2 capital instruments. Appendix 2 details information on own funds and key capital ratios.

Figure 4: Own Funds - Reconciliation between Financial Statements and Regulatory Own Funds

| Own Funds | 30 November 2014 (£m) | | |
|-------------------------------------|-----------------------|-----------------|---------------|
| | JIHL | JIL | JBL |
| Common Equity Tier 1 Capital | | | |
| Shareholders Equity | 414.16 | 374.90 | 194.43 |
| Retained earnings | (2.53) | 41.90 | (36.11) |
| Regulatory Deductions | | | |
| Additional value adjustments | (6.16) | (5.30) | (0.87) |
| Tier 1 capital | 405.47 | 411.50 | 157.45 |
| Subordinated Notes | 422.80 | 287.96 | 16.00 |
| Regulatory Deduction | 0.00 | 0.00 | 0.00 |
| Tier 2 Capital | 422.80 | 287.96 | 16.00 |
| Own Funds | 828.27 | 699.46 | 173.45 |
| Total Risk Weighted Assets | 4,274.05 | 3,458.89 | 761.45 |
| Common Equity Tier 1 Ratio | 9.5% | 11.9% | 20.7% |
| Total Capital Ratio | 19.4% | 20.2% | 22.8% |

Application of the Pillar 1 Framework

The Group makes use of the following approaches for the calculation of the minimum regulatory capital requirements under Pillar 1 for each risk factor:

- *Credit (and Counterparty Risk):* The Mark to Market method and the Financial Collateral Method are used for the calculation of risk exposures and for securities financing transactions respectively. The Financial Collateral Comprehensive Method is used for the valuation of any credit risk mitigants.
- *Market Risk:* The Standardised Approach is used except for a limited scope of products within the JIL equity options book and the JBL base metals options book for which the Group uses the scenario matrix approach. As at 30 November 2014, the size of these books was not material. The Extended Maturity Ladder method is used for the calculation of market risk for commodity positions. The Credit Valuation Adjustment ('CVA') capital requirement is calculated using the Standardised approach.
- *Operational Risk:* Basic Indicator Approach.

The Group makes no use of advanced internal models for the calculation of its capital requirements. Figure 5 summarises the capital requirements for the JIHL Group, JIL and JBL per risk type as at 30 November 2014.

Figure 5: Summary of Capital Requirements

| Regulatory Capital Requirements | | | |
|--|-------------------|-------------|-------------|
| As at 30th November 2014 | JIHL Group | JIL | JBL |
| (GBP in millions) | GBPm | GBPm | GBPm |
| Market Risk Requirement | 196 | 191 | 5 |
| Credit Risk Requirement | 27 | 15 | 6 |
| Counterparty Risk Requirement | 60 | 20 | 40 |
| Concentration Risk Requirement | 1 | 0 | 1 |
| Operational Risk Requirement | 52 | 45 | 9 |
| CVA Risk | 7 | 6 | 1 |
| Total Regulatory Capital Requirements | 342 | 277 | 61 |

Notes:

The calculation methodologies underlying the measurement of the risk exposures and risk exposure requirements above are those prescribed by the FCA for use by the JIHL Group in its consolidated regulatory risk reporting submitted to the FCA. In general, the measurement of exposures for regulatory risk reporting purposes is based on notional with prescribed haircuts. Therefore, these exposure measures may be materially different from those based on up-to-date market pricing used by the JIHL Group and the Jefferies Group generally for risk management internally and those used for other risk disclosures, including in Financial Statements and the Jefferies SEC disclosures.

Application of the Pillar 2 Framework

As part of the capital planning process, Jefferies ensures that the JIHL Group at consolidated level and its subsidiaries on a standalone basis have capital resources in excess of the minimum regulatory capital requirements which be required under stressed conditions. These stress tests inform decisions on the size and quality of capital buffers required to ensure capital adequacy under severe but plausible stressed scenarios. These results are incorporated into the capital planning process.

The minimum regulatory capital requirements for the JIHL Group entities have been agreed with the FCA through the FCA's Supervisory Review and Evaluation Process ('SREP') which sets the Individual Capital Guidance ('ICG'). The level of Pillar 2 capital held by JIL and JBL reflects the risks inherent in their business models and products traded as well as the governance, control and risk management infrastructure. JIL and JBL's assessments of their Pillar 2 requirements are then reviewed by the FCA and the final ICG levels agreed. The minimum regulatory capital requirement for JIL and JBL is the sum of the respective Pillar 1 and 2 requirements for each entity. The JIHL Group holds consolidated regulatory capital resources in excess of the consolidated regulatory capital requirements of JIL and JBL. JIHL Group's on-going compliance with the internal capital management targets and minimum regulatory capital requirements are monitored daily by senior management and reviewed against current and possible future market conditions, current portfolio composition and expected future business developments.

The JIHL Group ICAAP:

- Assesses current and future capital adequacy under BAUI and stressed operating environments over the capital planning horizon and in line with the stress testing framework; and
- Assesses internal capital adequacy thresholds relating directly to the Board-approved risk appetite and in line with the capital management framework.

Following the application of the Pillar 2 framework, the Group identifies the capital buffers and ratios that it seeks to apply at the entity level. These buffers set out:

- The minimum Solvency Ratio, CET1 Ratio and Total Capital Ratio required for each firm and the Group as a whole. Regulatory Leverage Ratio is also considered; and
- Any capital buffers required to be held including any amounts to be held under BAU conditions above these minimums to reduce the risk that these limits will ever be breached.

Capital Buffers

As part of the Group's capital planning and risk assessment, the additional requirements for capital buffers (including the conservation buffer and the countercyclical buffer) are considered according to the CRR requirements.

Other Risks Considered as part of the ICAAP

As part of the ICAAP, the Group considers and assesses other risks relevant to its operating activities that may not be covered, or adequately covered by Pillar 1. These include:

- **Large Exposures (Concentration Risk)** - This considers the risk that any credit exposures are concentrated with respect to sector; geography; and type of counterparty.
- **Regulatory Risk** - This considers the risks of financial loss arising from either a breach of the regulatory requirements and/or adverse impact of the rules (or changing rules) in conducting business.
- **Group Risk (including Reputational Risk)** - This assesses the risk that the financial position of the Group may be adversely affected by its relationships with other entities in Jefferies or by risks which may (or be perceived to) affect the financial position of the Jefferies group of firms, for example through reputational contagion.
- **Earnings Risk** - This considers the risk of capital erosion resulting from a significant decrease in the Group's revenues over the course of the economic cycle.
- **Interest Rate Risk in the Non-Trading Book** - This considers the interest rate risk arising from non-trading book activities. The Group manages its exposures within the trading book; as such this risk for the Group only refers to the interest rate risk applicable from its variable rate borrowing facilities used to support the trading activities. As at 30 November 2014, the impact of a 200 basis point shock was £10.2m.

4.1.4 TRANSFERABILITY OF CAPITAL

We do not believe that legal or regulatory restrictions constitute a material impediment to the transfer of capital between JIHL and its parent company, Jefferies Group LLC, or to the transfer of capital within the JIHL Group (JIL and JBL have been granted a Core UK Group waiver⁴). Any redemption terms in the Group's capital instruments are set out in Appendix 1.

4.2 CREDIT AND COUNTERPARTY RISK MANAGEMENT

4.2.1 CREDIT RISK MANAGEMENT

JIL and JBL are exposed to credit risk as trading counterparties to other broker-dealers and customers, through extending loan commitments, trading and as a member of exchanges and clearing organizations.

Credit risk is managed according to the framework of the Jefferies Credit Risk Management Policy and Procedures (the 'Credit Risk Policy') which is responsible for identifying counterparty credit risk throughout the trading businesses, establishing counterparty limits and managing and monitoring those credit limits. The policy is approved annually by the Board Risk Committee and includes:

- Defining credit limit guidelines and credit limit approval processes;
- Considering exposures to a single counterparty, or groups of connected counterparties, counterparties in the same country or region, and/or in the same industry (sector);

⁴ Subject to demonstrating conditions over fundability of capital and centralised risk management, firms within a Core UK Group can exempt certain intra-group exposures from large exposure limits; and can apply a 0% risk weight for the calculation of the credit risk capital requirements to intra-group exposures within the UK entities of the Group.

- Approving counterparties and counterparty limits (which take into account applicable enforceable netting agreements, collateral or other acceptable forms of credit risk mitigation negotiated by the Legal Department) within parameters set by the Credit Policy;
- Negotiating, approving and monitoring credit terms in legal and master documentation;
- Determining the analytical standards and risk parameters for on-going management and monitoring credit risk books;
- Actively managing daily exposure, exceptions, and breaches; and
- Monitoring daily margin call activity and counterparty performance (in concert with the JIL and JBL Collateral Management Departments).

The JIHL Group utilises a number of legal and market available credit risk mitigants to mitigate counterparty risk.

4.2.2 ASSIGNING CREDIT LIMITS FOR COUNTERPARTY CREDIT EXPOSURES

Credit Limit Assessment and Approval

Client Credit Exposure Limits are granted within a framework of Credit Ratings. Ratings provided by the external credit rating agencies ('ECAIs'). Standard & Poor's ('S&P'), Moody's and Fitch are used for all types of exposures, where these are available. Where a counterparty is rated by at least one of the three ECAIs, that rating is typically considered, otherwise an internal risk rating model is used, together with detailed credit analysis, to assess a credit rating for each client. Internal rating models are not used for the calculation of the regulatory capital requirements.

Credit Risk Management assesses counterparty credit risk and sets credit limits in the aggregate (at the counterparty group level) and for each individual counterparty and by netting set.

The counterparties' credit rating, together with considerations on size and leverage will signify a maximum credit limit ceiling for that client within the Global Credit Policy. A Credit Approval Grid within the Credit Policy dictates the size of credit limit which may be approved by Credit Manager, Senior Credit officer and Chief Credit Officer.

Documentation

The JIHL Group employs standard market documentation enhanced where relevant with the Group's own Terms of Business.

Limit Framework Methodology

Credit Risk Management assesses counterparty credit risk and sets credit limits at the counterparty group level; for each individual counterparty; and by specific product type. Counterparties are grouped in a hierarchy by common ultimate parent ('Corporate Hierarchy Group'). Limits must be approved per appropriate credit authorities and set as live in credit and trading systems before trading commences.

Limits are measured in terms of potential exposure. Credit limit and exposure methodology includes:

- **Credit Limit Types ('CLT')** - individual equity, fixed income and commodity product-specific limits defined and governed by master legal documentation; collateral terms; netting rules; trading and settlement characteristics; and
- **Credit Limit Measures** - based on various exposure metrics including notional, margin financing, settlement, mark-to-market or fair value amounts, and potential or expected exposures; tenor; haircuts; and collateralization.

The Group uses the large exposures regime and the limits within it to constrain regulatory capital to counterparty credit exposures.

4.2.3 CREDIT RISK EXPOSURE MEASUREMENT AND REPORTING IN JIHL

The Group uses an in-house designed Credit Risk Management System. The system holds the detailed reports written by the credit analysts on counterparties and gives detailed information on exposures grouped by industry type, country and by the type of underlying product traded.

All credit exposures are reviewed against approved limits on a daily basis. Credit exposures to companies with common ownership are grouped together to ensure aggregate limits do not exceed Credit Policy limits.

4.2.4 WRONG-WAY RISK

Wrong Way Risk ('WWR') is the risk that a credit exposure is negatively correlated with the credit quality of the counterparty to which the exposure relates. Specific WWR exists when legal or structural dependence adversely links exposure at default with the counterparty's credit quality. General WWR is present when counterparty creditworthiness and exposure are both correlated with market risk factors. In some instances both specific and general WWR can exist.

Incidences of Wrong Way Risk

Jefferies recognizes that General WWR is inherent in certain businesses. Where Jefferies has a requirement to finance or borrow securities, it is recognized that often it is most practical to obtain that funding from counterparties registered in the same country as the securities collateral. General Wrong Way Risk occurs where Jefferies is a borrower of securities.

The incidence of General WWR is considered in New Business Approval proposals and requires approval by the New Business Committee.

Little appetite exists for Specific WWR. Instances of specific WWR occasionally occur, for example where Jefferies borrows a counterparty's own securities as part of a diversified portfolio. Where initiated, Specific WWR trades must conform to the following:

- Counterparties of the highest creditworthiness available;
- Portfolio must remain within counterparty's potential exposure ('PE') limit after reduction to zero of the collateral item causing specific WWR; and
- Minimal tenors.

Specific WWR trades require approval of trade documentation by the Chief Credit Officer and CRO. Exposure is recorded as the full notional and frequent monitoring and reporting takes place to senior management throughout the life of the trade.

4.2.5 COLLATERAL MANAGEMENT AND VALUATION

The Group makes use of eligible credit risk mitigants including netting and collateral to reduce its credit risk exposures, subject to the relevant legal agreements meeting the requirements of the CRR.

Collateral Management

The key objectives of collateral management are to

- Define the underlying products that require margin maintenance within JIL and JBL;
- Define the operational margin process; and
- Ensure the appropriate management of credit and operational risk for the margin process.

The appropriate level of collateralisation is set for each client by Credit Risk in the legal negotiation process. These refer to valuations of transactions, in accordance with the contractual legal agreement and may include levels for any unsecured threshold, Minimum Transfer Amounts ('MTA') and acceptable collateral. Typically, this entails a preliminary review as well as periodic reviews of the credit risk for the counterparties.

The underlying business lines are governed by legal agreements. The Legal Department conducts negotiations, drafting and review of agreements. They enforce the collateral and margin agreements, including initiation of collections and lawsuits where appropriate. Risk Management are part of the negotiation process and will provide approval for any non-standard terms.

Collateral Eligibility and Valuation

Liquid, easy to settle and high quality collateral are the properties the Group seeks in collateral. All the securities offered as collateral must be approved by the Credit Risk Management team which assesses the counterparty's financial strength and the credit risks associated with the type of business and products. The team will then recommend credit limits and eligible collateral types on a client by client basis. This will be negotiated and approved in the legal documentation process prior to execution of any business.

The types of collateral considered include cash, fixed income securities (predominantly government bonds), Bank guarantees (Letters of Credit), equity stocks (large cap and highly liquid shares listed on major exchanges) and convertible bonds. As at 30 November 2014, the non-cash collateral held by the Group was not material. The collateral agreement or the trade documents set out who is responsible for the valuation of the collateral. No credit

derivatives were used as credit risk mitigants as at 30 November 2014. Given that the collateral held was predominantly cash and letters of credit, there were no credit or market risk concentrations related to collateral as a credit risk mitigant as at 30 November 2014.

Depending on the type of trade, the valuation may be done on a Mark to Market or Mark to Model basis. Valuation can be carried out intraday or real time for liquid products, or less frequently for any less liquid products.

4.2.6 COLLATERAL ON DOWNGRADE OF JEFFERIES CREDIT RATING

The impact of a one-notch downgrade in Jefferies rating on the collateral demanded by central counterparties is assessed as part of the Group's liquidity stress test assumptions and contributes to the liquid asset buffer calculation.

Collateral is considered for: derivative agreements (ISDA / CSA), securities financing agreements (GMRA / GMSLA); and exchange and central counterparty ('CCP') agreements. The Group seeks to manage its obligations by minimizing the number of the derivative agreements and securities financing agreements that have terms permitting this. As such, as at 30 November 2014, one notch downgrade of Jefferies rating would have no material impact on the amount of collateral to be posted by JIHL to these counterparties. The impact on one notch downgrade in Jefferies rating on the collateral demanded by CCPs would be £37m.

4.2.7 CREDIT RISK QUANTITATIVE DISCLOSURES

Figure 6 provides a summary of the consolidated capital requirements for credit and counterparty risk as at 30 November 2014 and calculated using the Mark-to-Market method (article 474 of CRR). Figures 6 to 14 provide an overview of the credit risk exposures as at 30 November 2014.

Figure 6: Credit Risk Capital Requirements by Exposure Class

| Consolidated Credit Risk Capital Requirement | | | | |
|--|--------------------------------------|--|---|--|
| <i>Analysed by Applicable Standardised Approach Exposure Classes</i> | | | | |
| As at 30 November 2014 (GBPm) | Credit Risk Capital Component | Counterparty Risk Capital Component | Concentration Risk Capital Component | Credit Risk Capital Requirement |
| Sovereign | 0 | 0 | 0 | 0 |
| Institutional | 27 | 19 | 1 | 47 |
| Corporate | 0 | 40 | 0 | 40 |
| Other | 0 | 1 | 0 | 1 |
| Total Consolidated Credit Risk Capital Requirements | 27 | 59 | 1 | 87 |

Notes:

The calculation methodologies underlying the measurement of the risk exposures and risk exposure requirements above are those prescribed by the FCA for use by the JIHL Group in its consolidated regulatory risk reporting submitted to the FCA. In general, the measurement of exposures for regulatory risk reporting purposes is based on notional with prescribed haircuts. Therefore, these exposure measures may be materially different from those based on up-to-date market pricing used by the JIHL Group and the Jefferies Group generally for risk management internally and those used for external risk disclosures, including in Financial Statements and the Jefferies SEC disclosures.

| Total | | | | | 6,152 | 3,794 |

4.2.8 PAST DUE AND IMPAIRED EXPOSURES

For investment banking fees and certain commissions, payment terms are agreed as part of the client engagement. Senior Management makes a provision for receivable items falling behind their agreed contractual due date ('past due exposures'). As at 30 November 2014 the Group recognise specific provisions related to past due exposures as shown in figure 15. The Group does not make general provisions according to its accounting principles.

In terms of impaired exposures, the Group assesses at each balance sheet date whether there is objective evidence that a financial asset or group of financial assets is impaired. Where this evidence exists the assets are re-measured to reflect the present value of expected future cash flows. The difference between the carrying amount and the present

value of expected future cash flows is recognised in the profit and loss account for the period. As at 30 November 2014, there were no impairments for the Group.

Figure 15: Provisions related to past due exposures

| Counterparty Type | Past Due Exposures (£ in millions) | Bad Debt Provision Charged to P&L during the period (£ in millions) |
|-------------------|------------------------------------|---|
| Institution | 3.27 | 0.17 |
| Corporate | 34.64 | 33.51 |
| Total | 37.92 | 33.68 |

The past due exposure and bad debt provision are associated with the bankruptcy of a major counterparty of JBL. There are on-going discussions with the trustee liquidator of the former counterparty with a view to recovering the monies owed to JBL. However, due to the uncertainty involved in this process all of the receivable has been provided for within the JIHL profit and loss account for the year ended 30 November 2014.

4.3 MARKET RISK MANAGEMENT

4.3.1 MARKET RISK MANAGEMENT

Market risk may arise from a variety of activities including market-making, trading, underwriting, and investing. The Group's trading strategies to manage exposure to market risk include diversifying exposures, controlling position size, and establishing economic hedges in related securities or derivatives, although gains and losses can occur for positions that are hedged.

The management and reporting of the Group's consolidated regulatory exposures and capital requirements against applicable internal thresholds, regulatory limits or available regulatory resources is carried out independently by the Regulatory Controllers Department.

The Market Risk Management team ('Market Risk Management') is a function independent of the revenue-generating units that monitors all trading activities; it reports to the CRO and to global Market Risk Management Heads.

Market Risk Management designs and develops risk management approaches which are subject to ongoing review. Risk exposures are monitored daily against pre-defined limits. In addition, risk reports are generated and monitored every day. Market Risk Management also assists Product Control in the Independent Price Verification ('IPV') process for valuations where external prices are not readily available.

Market Risk Management uses a wide range of techniques to manage the market risks inherent in our businesses/portfolios, including Value-at-Risk for internal reporting purposes (and not for the calculation of regulatory capital requirements). Market Risk Management recognises the limitations in using VaR as an isolated measurement of market risk. Hence, Market Risk Management uses additional methodologies to complement the VaR calculations to assess, monitor and manage market risk. Other key metrics included in the framework include inventory position and exposure limits on a gross and net basis; scenario analysis and stress tests; Risks-Not-in-VaR reports; sensitivities (including Greeks); exposure concentrations including collateral; aged inventory; amount of Level 3 assets; counterparty exposure; leverage; cash capital; and performance analysis metrics.

Scenario Analysis and Stress Tests

Stress testing is used to analyze the potential impact of specific events or moderate or extreme market moves on the current portfolio both firm wide and within business segments. Stress scenarios comprise both historical and hypothetical market environment, and generally involve simultaneous changes of many risk factors. Indicative market changes in the Group's scenarios include, but are not limited to, a large widening of credit spreads; a substantial decline in equities markets; significant moves in selected emerging markets; large moves in interest rates; changes in the shape of the yield curve and large moves in European markets. In addition, Market Risk Management also performs ad hoc stress tests and add new scenarios as market conditions dictate. Stress testing is performed and reported at least daily as part of the risk management process.

4.3.2 MARKET RISK QUANTITATIVE DISCLOSURES

Figure 16 shows the components of the consolidated market risk regulatory capital requirements for the JIHL Group as at 30 November 2014.

Figure 16: Market Risk Capital Requirements

| Market Risk Capital Requirements | | | |
|--|-------------|-------------|-------------|
| As at 30 November 2014 | | | |
| (GBP in millions) | JIHL | JIL | JBL |
| | GBPm | GBPm | GBPm |
| Interest Rate Position Risk Requirement | 160.0 | 160 | 0 |
| Equity Position Risk Requirement | 19.0 | 19 | 0 |
| CIU Position Risk Requirement | 5.0 | 5 | 0 |
| Commodity Position Risk Requirement | 5.0 | 0 | 5 |
| Foreign Exchange Position Risk Requirement | 7.0 | 7 | 0 |
| Total Consolidated Market Risk Capital Requirements | 196 | 191 | 5 |

Notes:

The calculation methodologies underlying the measurement of the risk exposures and risk exposure requirements above are those prescribed by the FCA for use by the JIHL Group in its consolidated regulatory risk reporting submitted to the FCA. In general, the measurement of exposures for regulatory risk reporting purposes is based on notional with prescribed haircuts. Therefore, these exposure measures may be materially different from those based on up-to-date market pricing used by the JIHL Group and the Jefferies Group generally for risk management internally and those used for external risk disclosures, including in the Financial Statements and the Jefferies SEC disclosures.

4.3.3 SECURITISATIONS

As part of JIL's Fixed Income business, the Group engages in buying and selling third-party securitisations to support its client franchise. As such JIL is not defined as an originator or a sponsor for regulatory purposes. The Group is defined as an 'investor' (as per the definition in the CRR).

JIL holds long inventory only in the trading book. There is no activity booked in the non-trading book. The activities are valued and subject to the Jefferies Group's Accounting Policies, as set out in the Jefferies Group 10-K disclosures. The risks associated with this activity are managed under the Credit and Market Risk Management frameworks.

4.3.4 APPROACH TO CALCULATING RISK WEIGHTED ASSETS ('RWAs')

The Group uses ratings from Moody's, Fitch and Standard & Poor's for its securitisation positions and calculates its capital requirements under the standardised approach as set out in article 251 of the CRR. Figures 17 to 19 set out the securitisation exposures in the trading book and associated capital requirements broken down by type of exposures and risk weight bands (credit quality steps – 'CQS'). As at 30 November 2014, 60% of JIL's securitisation inventory was in CQS 3 or above compared to 43% at the 2013 accounting reference date.

Figure 17: Securitisation Exposures and corresponding Capital Requirement

| JIHL Securitisation exposures and corresponding capital requirements | | |

| Other | 2 | 0 | 2 |
| Total | 304 | 0 | 304 |

4.4 OPERATIONAL RISK MANAGEMENT

The JIHL Group has an established Operational Risk Management Framework ('ORMF') which has been approved by the JIL and JBL Boards. This is a key component of the RMF and includes governance; application of common principles and standards; collection and analysis of operational risk events and exposures; proactive operational risk management; and periodic review and analysis of business metrics to identify and recommend controls and process-related enhancements. The framework is supplemented by a number of policies and controls including:

- Risk Self-Assessments by each Department, aggregated to form the Risk Register;
- A programme of controls assurance against its operational risks;
- Incident Reporting requirements, detailing the timing and process of reporting;
- Key Risk Indicators ('KRIs') subject to measurable thresholds reflecting the risk tolerance of the business;
- Ad-hoc risk assessments, triggered by a Board or Senior Management request, on a specific business line, support area, product, process or system; and
- Consistent operational risk taxonomy for data classification, aggregation and trend analysis.

Each revenue producing and support department is responsible for implementing the Operational Risk Management Framework; carrying out regular Risk Self-Assessments; and timely reporting and managing their incidents and Key Risk Indicators. A central Operational Risk Management team ('ORM') is responsible for the maintenance and oversight of the framework, ensuring its consistent implementation across Jefferies as well as providing the operational risk tools and infrastructure for departments to record, manage and report their operational risk exposures.

Internal Audit is responsible for providing independent, objective assurance on the management of operational risk in each department, audit of key controls, and review of the effectiveness of the Operational Risk Framework.

The Jefferies Operational Risk System ('JORS') accommodates all processes and data on the same platform for analysis and reporting.

Capital Requirements Calculation for Operational Risk

The Group follows the CRR's Basic Indicator Approach for the calculation of the consolidated minimum Operational Risk capital requirement under Pillar 1. ORM is responsible for the methodology for assessing the capital requirement as part of ICAAP based on a scenario analysis approach. Scenarios are used to highlight potentially significant risks to Senior Management, beyond those that have been identified in other operational risk processes. They are forward looking and focus on the risks which, if they occur, would have a severe, but plausible, impact on the JIHL Group.

4.5 CONDUCT RISK MANAGEMENT

Conduct Risk is recognised by the Boards as constituting one of the Firms' Principal Risks. Compliance and HR take responsibility for the second line of defence for Conduct Risk while Operational Risk management collects loss events data and assist in identification of control improvement and event follow up.

Each employee is responsible for his or her own conduct in carrying out his or her role and to ensure that such conduct is consistent with the ethical value of respect, honesty and integrity. Such conduct includes acting in compliance with all the relevant laws, rules and regulations that impact on the employees' role. The Boards have mandated various policies and procedures to enable the Group and its employees to understand and fully comply with the regulatory and ethical standards expected from them.

4.6 LIQUIDITY RISK MANAGEMENT

4.6.1 LIQUIDITY RISK MANAGEMENT FRAMEWORK AND PROCESS

The Group's main liquidity risks analysed using the FCA's liquidity risk driver framework are wholesale secured funding risk, intraday liquidity risk and off balance sheet liquidity risk. Liquidity risk is managed through the implementation of the Liquidity Risk Management Framework ('LRMF'); this sets out the limits supporting the liquidity risk appetite statement; identifies the liquidity risks inherent in the business and funding models; and sets out the tools through which those liquidity risks are measured, managed, monitored and controlled including stress testing, early warning indicators, liquid asset buffer management, and cash and intra-day liquidity usage management. Liquidity risk is assessed as part of the Board-approved ILAA process.

In addition to compliance with the current Individual Liquidity Guidance metric, the Group also reports the Liquidity Coverage Ratio ('LCR') to the FCA. More details about the Jefferies Group Liquidity Risk Management Framework and the use of the Group stress testing approach can be found in the Jefferies Group 10-K report.

4.6.2 ASSET ENCUMBRANCE

An asset is considered encumbered if it has been pledged or if it is subject to any form of arrangement to secure, collateralise or credit enhance any on balance sheet or off balance sheet transaction from which it cannot be freely withdrawn. An asset is considered unencumbered if it has not been pledged against an existing liability. We categorise unencumbered assets as "available" or "not available": unencumbered assets available are the assets that are readily available for future collateral needs; unencumbered assets not available are the assets that cannot be pledged as collateral (this comprises most of the client receivables, derivative contracts and certain assets that do not meet the collateral requirements).

As an integral aspect of their respective business models, JIL and JBL engage in activities that result in certain assets being encumbered as security for borrowings or through segregation. Figures 20, 21 and 22 provide a breakdown of the asset encumbrance at the JIHL consolidated group level using the median of quarter end value of the Firms' financial year in 2014. The Group does not exceed the FCA's threshold for disclosure of the fair value of collateral received.

Figure 20: Asset Encumbrance Summary

| JIHL Asset Encumbrance (GBP in millions) | Carrying amount of encumbered assets | Fair value of encumbered assets | Carrying amount of unencumbered assets | Fair value of unencumbered assets |
|---|---|------------------------------------|---|--------------------------------------|
| Assets of the reporting institution | 2,391 | | 3,523 | |
| Equity instruments | 115 | 119 | 21 | 21 |
| Debt securities | 1,726 | 2,022 | 187 | 187 |
| Other assets | 550 | | 3,314 | |

* Numbers were calculated based on the median value for each quarter end of the Group's financial year in 2014

Figure 21: Breakdown of Unencumbered Assets

| JIHL Breakdown of Unencumbered Assets (GBP in millions) | Encumbered - Fair Value Pledged as Collateral | Unencumbered - Fair Value | | Total Assets |
|--|--|---------------------------|---------------|--------------|

|---|--|---|
| Carrying amount of selected financial liabilities | 3,574 | 3,596 |

4.6.3 INFORMATION ON IMPORTANCE OF ENCUMBRANCE

The Group's main source of encumbrance is JIL's use of secured financing to fund inventory for its market-making activities. This funding is predominantly secured on high quality liquid cash securities such as government bonds and main index equities using industry-standard market legal agreements (GMRA for repo and GMSLA for stock borrow/loan). These agreements permit the counterparty to realise the security held to recover their funds once the stipulated terms of default are met.

JBL's business model as a commodities futures broker means that its encumbered assets are primarily client cash or other assets placed with exchanges and brokers which are segregated in accordance with applicable regulatory requirements.

The sources and types of the encumbrance of the Group's assets have not changed in the last 12 months. The extent varies in accordance with the growth or decline in the value of the market-making inventory or client assets being financed or segregated respectively.

In Figure 20, other assets primarily (90%) consist of securities, derivatives and financing transaction receivables driven by JIL and brokerage receivables associated with the JBL business. The balance is predominantly cash.

5 REMUNERATION

The following remuneration disclosures are made in accordance with article 450 of the CRR and the FCA's SYSC519.3A (Remuneration Code, 'the Code') for the financial year ended 30 November 2014 in respect of the JIHL Group and significant subsidiaries in scope. These disclosures are made in accordance with the guidance on proportionality; JIL and JBL are classified as Level 3 firms.

5.1 REMUNERATION POLICY AND THE DECISION-MAKING PROCESS

The relevant operating companies within the JIHL Group that employ Jefferies staff are JIL, JBL and Jefferies (Switzerland) Limited ('JSL', a JIL subsidiary company). The business strategy for JIHL is to provide quality services to Jefferies' clients, to increase revenues, and to provide a return to shareholders and other stakeholders. As such the compensation policies and practices are designed to be flexible to support these objectives in a highly competitive market, improve individual and corporate performance and contribution while managing risk effectively in recognition of our employees being critical to executing the business strategy successfully.

5.1.1 GOVERNANCE

The Group promotes sound and effective risk management practices and does not encourage risk-taking that exceeds the risk appetite levels. JIL and JBL have number of risk management and compliance policies and procedures in place, including procedures for new business approval, client credit check, traders' mandates, limits for balance sheet usage and cash usage as well as periodically anti-money laundering training for all the employees.

The Boards of JIL and JBL review these policies and practices and the incentives created for managing risk, capital and liquidity to ensure that these accord with the risk appetite. The Boards review business performance and compensation costs for each business unit.

In June 2014 the Boards established a joint Remuneration Committee whose members are the Non-Executive Directors of JIL and JBL. The Committee meets at least twice a year (it met once in 2014 due to the timing of its establishment) and is supported by the Remuneration Working Group ('RWG'), which provides information to Committee on Remuneration Code issues and practices. The RWG is constituted of representatives from Finance, Legal, Compliance, Risk, and Human Resources. The RWG met twice in 2014.

The remit of the Remuneration Committee is set out in the Committee's charter. Principally, the Committee is responsible for:

- Annual review and approval of the Remuneration Policy Statement for JIL and JBL;
- Annual review of the Group's policies and practices for remuneration and incentives created by its remuneration system for staff generally and Code Staff (*as defined in section 5.3*);
- Ensuring that the Group's remuneration policy complies with the Remuneration Code and other legal and regulatory requirements and industry guidance as considered relevant.

In carrying out its duties, the Committee takes into account the long term interests of the Group's shareholder(s), risk management for the Group and the financial condition and future prospects of the Group.

For the financial year ended 30 November 2014, the Remuneration Committee and the RWG was given independent advice from Pricewaterhouse Coopers LLP on remuneration policy, Remuneration Code requirements and design characteristics and structures of the remuneration system.

5.2 DESIGN CHARACTERISTICS OF THE REMUNERATION SYSTEM IN JIHL

Jefferies rewards employees with fixed and variable remuneration (principally, base salaries and bonuses respectively). Fixed pay is decided by reference to a variety of factors including seniority of the role within the organisation, experience of the person in that role and competitive market data for that role.

As regards bonuses, Jefferies operates a general discretionary year-end bonus scheme, the purpose of which is to reward and incentivise JIL and JBL employees, including their Code Staff (see section 5.2.1 below regarding the link between pay and performance). All employees of the JIHL Group are eligible to participate in this scheme; there are no bonus schemes specific to Code Staff only. Year-end performance awards are made from annual bonus pools for the financial year, calculated on a business unit basis.

⁵ FCA's Senior Management Arrangements, Systems and Control Sourcebook

Jefferies will consider offering guarantee payments and/or buying out deferred variable remuneration for prospective hires where the hire is of particular importance to the group for achieving its business objectives. Guarantees and buy-outs are subject to senior management approval.

Depending on the level of an employee's total compensation, variable remuneration may either be paid in unrestricted or restricted cash (guaranteed or buy-out awards are always restricted). Where awards are restricted they are subject to vesting and clawback terms. The Group monitors the ratio of fixed to variable compensation for Code Staff to ensure adherence with the General Requirement of the Code.

Jefferies considers that its remuneration practices are appropriate, taking into account the size, internal organisation and the nature, scope and complexity of the activities of the Jefferies Group, and:

- Align with Jefferies's business strategy (stated above);
- Encourage behaviour that supports the long term financial soundness and risk management framework; and
- Comply with all relevant regulatory requirements.

5.2.1 LINK BETWEEN PAY AND PERFORMANCE

JIL and JBL have an annual Business Plan approved by the Boards in January each year. Business units consider performance targets and budgets annually, and feed this into the Business Plan. As indicated, business unit performance and remuneration costs are regularly reviewed by the Boards against the Business Plan. In the event of the Group's performance being weak, the bonus pool and any distributions will be reduced accordingly at the discretion of the senior management of the relevant business unit.

The discretionary nature of the bonus schemes enables management to review individual employee performance against financial and non-financial measures and to take appropriate action to reduce or otherwise extinguish any entitlement to bonus on the grounds of failure to comply with risk and/or compliance policies (including breaches of desk and/or individual risk limits) even where performance against financial targets would otherwise have led to a bonus being awarded.

When determining employee performance awards, the factors considered include, but are not limited to:

- An employee's performance during the year, against financial and non-financial metrics, with specific attention to stand-out performance, active contribution and adherence to expected risk and compliance requirements;
- Performance and profitability of the business unit, the relevant legal entity, and the wider Jefferies group;
- Overall contribution of the individual to the business unit performance;
- Importance of the sector / business unit and the need to retain the individual; and
- Competitive market data and performance of the financial markets in general.

5.2.2 VESTING

The performance awards are announced and paid in the fiscal quarter immediately following the end of the fiscal year to which the bonus relates, provided the individual is a Jefferies' employee on the date that the award is made and is not under notice, whether given by Jefferies or the employee, to terminate their employment. Further, individuals will not be eligible to receive bonus awards where they are suspended or under investigation for conduct that could result in termination for misconduct.

Jefferies' current practice is to pay end-of-year performance bonuses in up-front cash. The vesting periods applicable to 2014 restricted awards range between one and four years to encourage employees to take a multi-year perspective.

5.3 AGGREGATE QUANTITATIVE INFORMATION ON REMUNERATION

Figure 23 presents the aggregate quantitative remuneration by business area for Code Staff in the JIHL Group for the financial year ended 30 November 2014. Code Staff are broken down into:

- i. Senior Management: includes all employees who are registered with the FCA as performing Significant Influence Functions ('SIFs') for the entities in scope, and all employees who (whether or not a SIF) have responsibility for the management and supervision of a significant business line or who head a business line that has a material impact on the Group's risk profile; and

- ii. Other members of staff: includes all other employees whose professional activities could have a material impact on the Group's risk profile.
